Result

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A;Title: Molecular cloning of the camine CD44 antigen cDNA.
A;Reference number: $45305
A;Accession: $45305
A;Accession: $45305
A;Status: preliminary
A;Molecule type: mRNA
A;Residues: 1-351 < MIID>
A;Cross-references: EMBL; Z27115; NID:9473226; PIDN:CAA81630.1; PID:9473227
C;Superfamily: human cell adhesion protein CD44

SUBCELLULAR LOCATION: Type I membrane protein.

PTM: Extensively modified including N- and O-linked glycosylation, addition of the glycosaminoglycan chondroitin sulfate, of sulfate, of phosphate to cytoplasmic domain serine residues.

SIMILARITY: Contains 1 link domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  PF00193; Xlink; 1.

-i- PTM: N-glycosylated (By similarity).
-i- PTM: O-glycosylated; contains chondroitin sulfate glycans which can be more or less sulfated (By similarity).
-i- PTM: Phosphorylated; activation of PKC results in the dephosphorylation of Ser-742 (constitutive phosphorylation site), and the phosphorylation of Ser-708 (By similarity).
-i- POLYMORPHISM: Two allelic forms of this glycoprotein, PGP-1.1 and PGP-1.2, have been reported. The expressed product is PGP-1.1 (Ly-24.1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDIINE=93286043; PubMed=8509359;

PTM: N-glycosylated (By similarity).
PTM: O-glycosylated; contains chondroitin sulfate glycans w
can be more or less sulfated (By similarity).
PTM: Phosphorylated; activation of PKC results in the
dephosphorylation of Ser-395 (constitutive phosphorylation
and the phosphorylation of Ser-361 (By similarity).
SIMILARITY: Contains 1 link domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         lymph node homing.
SUBCELLULAR LOCATION: Type I membrane protein.

ç

SUBCELLULAR LOCATION: Type I membrane protein.

PTM: Extensively modified including N- and O. sulfate, of sulfate, addition of the glycosaminoglycan chondroitin sulfate, of sulfate, of phosphate to cytoplasmic domain serine residues.

SIMILARITY: Contains 1 link domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                 Name=1; Synonyms-short; Isode-PSP 005330; Isode-P26051-2; Sequence-VSP 005330; PTW: N-glycosylated (By similarity). PTW: N-glycosylated; contains chondroitin sulfate glycans were can be more or less sulfated (By similarity). Phosphorylated; activation of PKC results in the dephosphorylated; activation of FKC results in the dephosphorylation of Ser-467 (constitutive phosphorylation and the phosphorylation of Ser-433 (By similarity). SIMILARITY: Contains 1 link domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Probably involved in matrix adhesion, lymphocy lymph node homing.
SUBCELLULAR LOCATION: Type I membrane protein.

"CD44 is the principal cell surface receptor for hyaluronate.";

Cell 61:1303-1313(1990).

-I- FUNCTION: Main cell surface receptor for hyaluronate. Adhesion to
mucosal high endothelial venule and to types I and VI collagen.

Probably involved in matrix adhesion, lymphocyte activation and
lymph node homing.
-I- SUBCELIULAR LOCATION: Type I membrane protein.
-I- INDUCTION: By IBV
-I- PTM: Extensively modified including N- and O-linked glycosylation,
addition of the glycosaminoglycan chondroitin sulfate, of sulfate,
of phosphate to cytoplasmic domain serine residues.

G1 contains link domains and thus consists of three disulfide-bonded loop structures designated the A, B, B' motifs. G2 is similar to G1. The keratan sulfate and the chondroitin sulfate (CS) attachment domains lie between pym; Contains mostly chandrain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           164 N--PEDIYPSNPTDDDVSSGS-----SSERSSTSGGYIFYTFSTYHP

Spicer A.P., Parry G., Patton S., Gendler S.J.;

"Molecular cloning and analysis of the mouse homologue of the tumor-
associated mucin, MUC1, reveals conservation of potential O-
glycosylation sites transmembrane, and cytoplasmic domains and a
loss of minisatellite-like polymorphism.";

J. Biol. Chem. 266:15099-15109(1991).

CYTOSKELETON.
SUBCELILLAR LOCATION: TYPE I MEMBRANE PROTEIN. EXCLUSIVELY L
IN THE APICAL DOMAIN OF THE PLASMA MEMBRANE OF HIGHLY
POLARIZED EPITHELIAL CELLS.
TISSUE SPECIFICITY: EXPRESSED IN A VARIETY OF EPITHELIAL
TISSUE SPECIFICITY: EXPRESSED IN EPITHELIAL CARCINOWAS.
TISSUES, ABERRANTLY EXPRESSED IN EPITHELIAL CARCINOWAS.
PYM: HIGHLY O-GLYCOSYLATED AND PROBABLY ALSO N-GLYCOSYLATED.
SIMILARITY: CONTAINS 1 SEA domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PS50024;
